Certifications

Certifying the quality of the products and the productivity processes is extremely important for a dynamic and competitive company, it is also a choice of transparence for customers, vendors, employees, share owners, banks, neighbours. That is the reason why Eurocartex has decided to certify its own Quality and Environmental System in accordance with the provisions of the International Standard Organization **ISO**.

In 1998 the company had already certify its own Quality System according to UNI EN ISO 9001 provisions. On 20th December 2006 Eurocartex obtains the certificate of its own Environmental Management System in compliance with UNI ES ISO 14001 standard. We successfully pass the surveillance Audit on 15 th November 2007.

The Eurocartex' s Quality System UNI EN ISO 9001 is fully part of the company's mission. The main goal is to satisfy the customer through a continuous improvement of the efficacy and efficiency of the company's organization and its process. The Eurocartx's policy is not only carried out and verify, but also documented and registered in the official text "The Quality Policy".

The Environmental Management System UNI EN ISO 14001 guarantees that the company work in respect of the environment, with the introductions of procedures and control activities of environmental risks.

Here too, Eurocartex's policy is explicitly stated in the document, "Environmental Policy".

What is ISO Certification

The International Standard Organization (ISO) is an organization established in 1947, headquartered in Geneva (Switzerland) that promotes worldwide the development of standardization and related activities better known as standard with a view to facilitating the international exchange of goods and services, and to developing cooperation in the spheres of intellectual, scientific, technological and economic activity.

Throughout the years the ISO ruled on different laws to implement a very high number of businesses. This is what is called ISO 9001 related to Quality Systems; ISO 14000 for Environmental management System. The following provisions are transferred to the National Bodies that have to translate them in the local language, ensure and coordinate the bureaucratic and administrative procedures. In Italy the translation body is the UNI and the administrative one is the SINCERT.

When an Italian Company declares that it is ISO 9000 certified, it is referring to the fact that its Quality System has undergone thorough auditing by a certification body recognised by SINCERT (Accreditation Body of the certification organisations), and has received a document (the certificate) attesting to the system's compliance with ISO standards. The same for environmental management standards.

What is a Quality System

A Quality System is a way to organize a better control on the quality in accordance with international standards by using methodologies, procedures and elements related to the purpose.
